PRIVATE POST FOR OUTLOOK

Email is like a postcard

Imagine a postcard. How hard would it be for someone to flip it over and read what you'd written? Email is a lot like that postcard — exposed. What you write in email becomes public the moment you hit the send button. It travels over public networks and along the way it can be easily intercepted, read and even altered.

Private Post is email just as you know it except it's delivered inside an envelope only the intended recipient can open. This keeps it safe from prying eyes.

**SNOOPERS
BEWARE!**

Private Post is delivered inside an envelope only the intended recipient can open

WITHOUT PRIVACY YOU'RE AT RISK

SPAM, spyware, viruses, phishing, identity theft. Every day we are inundated with malware — malicious software roaming free across the internet. Your exposed email offers hackers the perfect opportunity to harvest private information about you and use this to their financial gain. You wouldn't even know it was happening.

Hackers scrape the most common pieces of information from your emails for SPAM and identity theft. Often this is information you probably don't think is important: your email address, your name, your phone number or company address, the names and email addresses of your friends.

THE ANSWER IS EMAIL ENCRYPTION

Encryption is not in common use because, until now, there hasn't been a program easy enough for everyone to use. Encryption effectively scrambles the content of your messages and links this to the intended recipient's email address so the person you sent the email to is the only person who can read it.

It takes just minutes to install Private Post and register as a user — no training or special knowledge required. The program puts a Make Private button on your email toolbar and, when you click it, your message is scrambled for the intended recipient.

We never handle, transport or store the actual content of the mail messages that are being secured with our technology

Datasheet

FEATURES

- Send email privately with one click
- All you need is the recipient's email address
- Recipients easily get their own reader for free
- Takes minutes to install
- Encrypts email and attachments
- Automatically verifies the sender
- Based on revolutionary new technology

BENEFITS

- Guards email with military-grade encryption
- Protects against identity theft and phishing
- Protects your personal data
- Adds integrity to your email
- Helps protect the people you email
- Requires no additional hardware
- Zero infrastructure cost

TECHNICAL REQUIREMENTS

OPERATING SYSTEMS SUPPORTED

Windows XP (SP2)

MAIL CLIENT

Microsoft® Outlook®

MINIMUM PROCESSOR

500 Mhz (Recommend 1 Ghz or greater)

MEMORY

256 Mb RAM (Recommend 512 Mb RAM or greater)

TYPICAL DISK SPACE REQUIRED

10 Mb
